

frame

The new standard for security awareness

Challenge

Attackers know your company. Your people should too.

Legacy vendors don't prepare your organization for the urgent voice call coming from your CEO, or the vibe-coded application in production. Frame generates training and simulations built from your world - your threats, your policies, your tech stack.

Solution

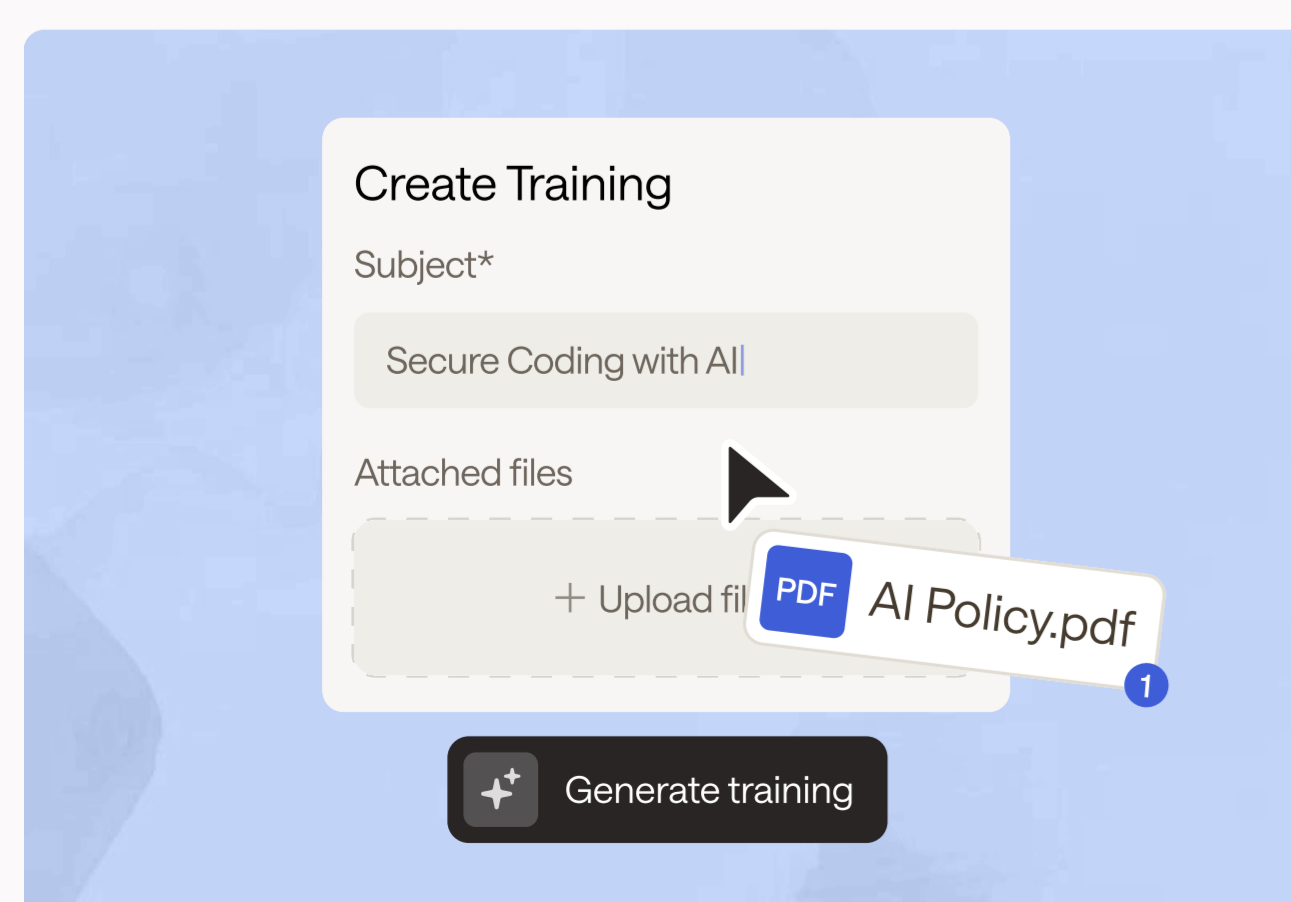

Prevent AI-powered threats and eliminate human risk.

Frame's AI engine learns your organization and creates personalized security training, phishing simulations, and deepfake scenarios in minutes. Training built for your world.

How it works

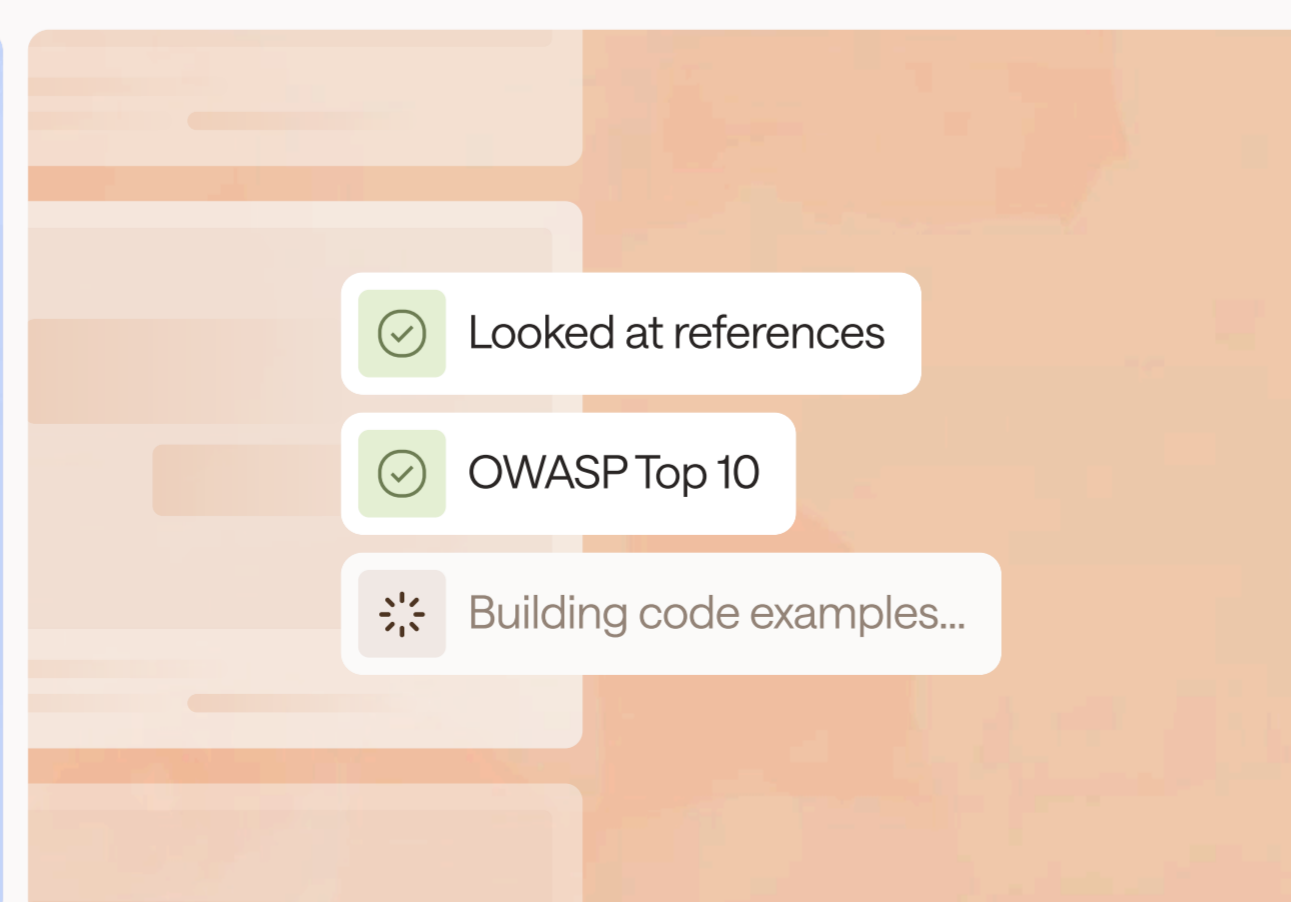

> Collect

Collect data on the requested training or simulation from multiple sources

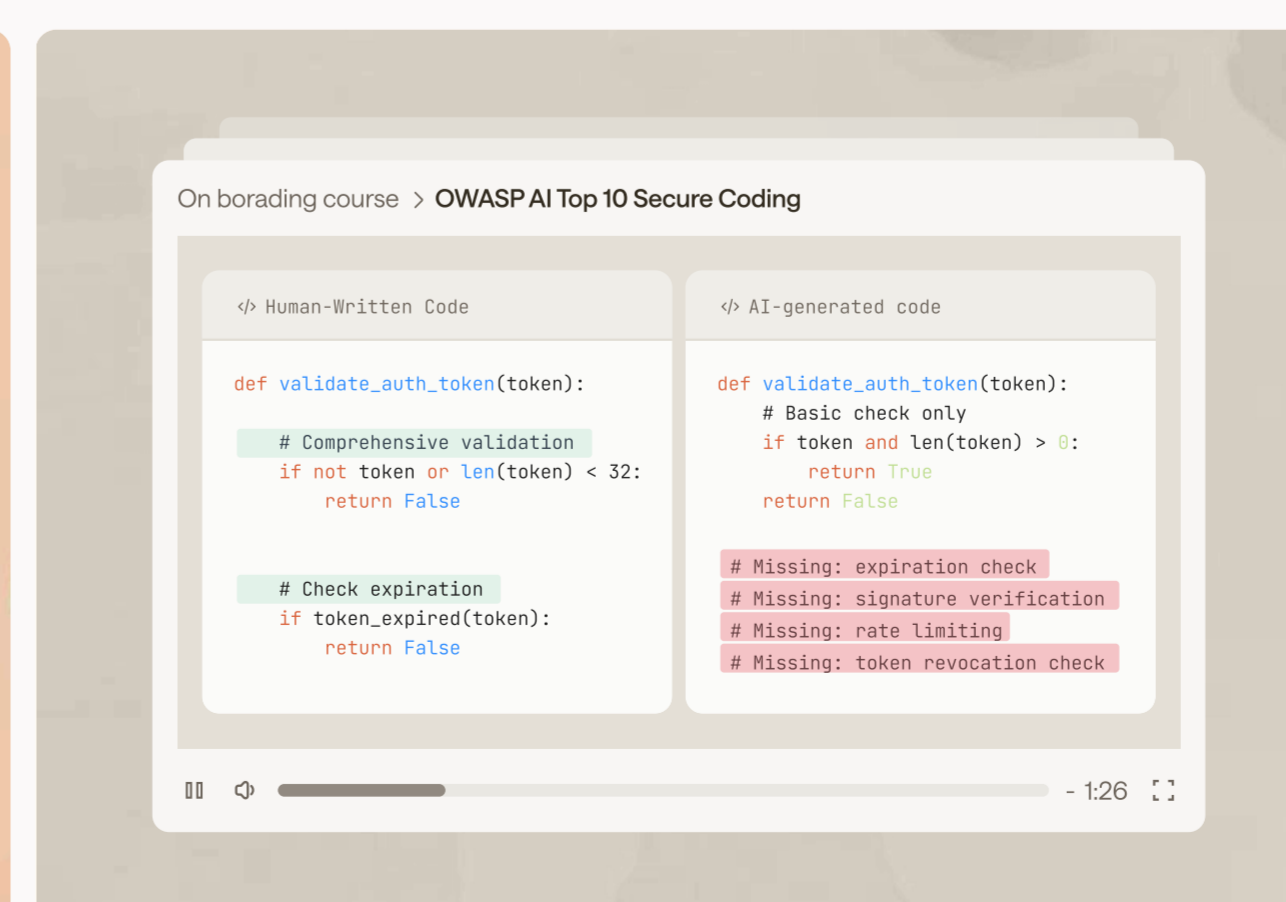

> Contextualize

Analyze and contextualize the sources to create structured training data

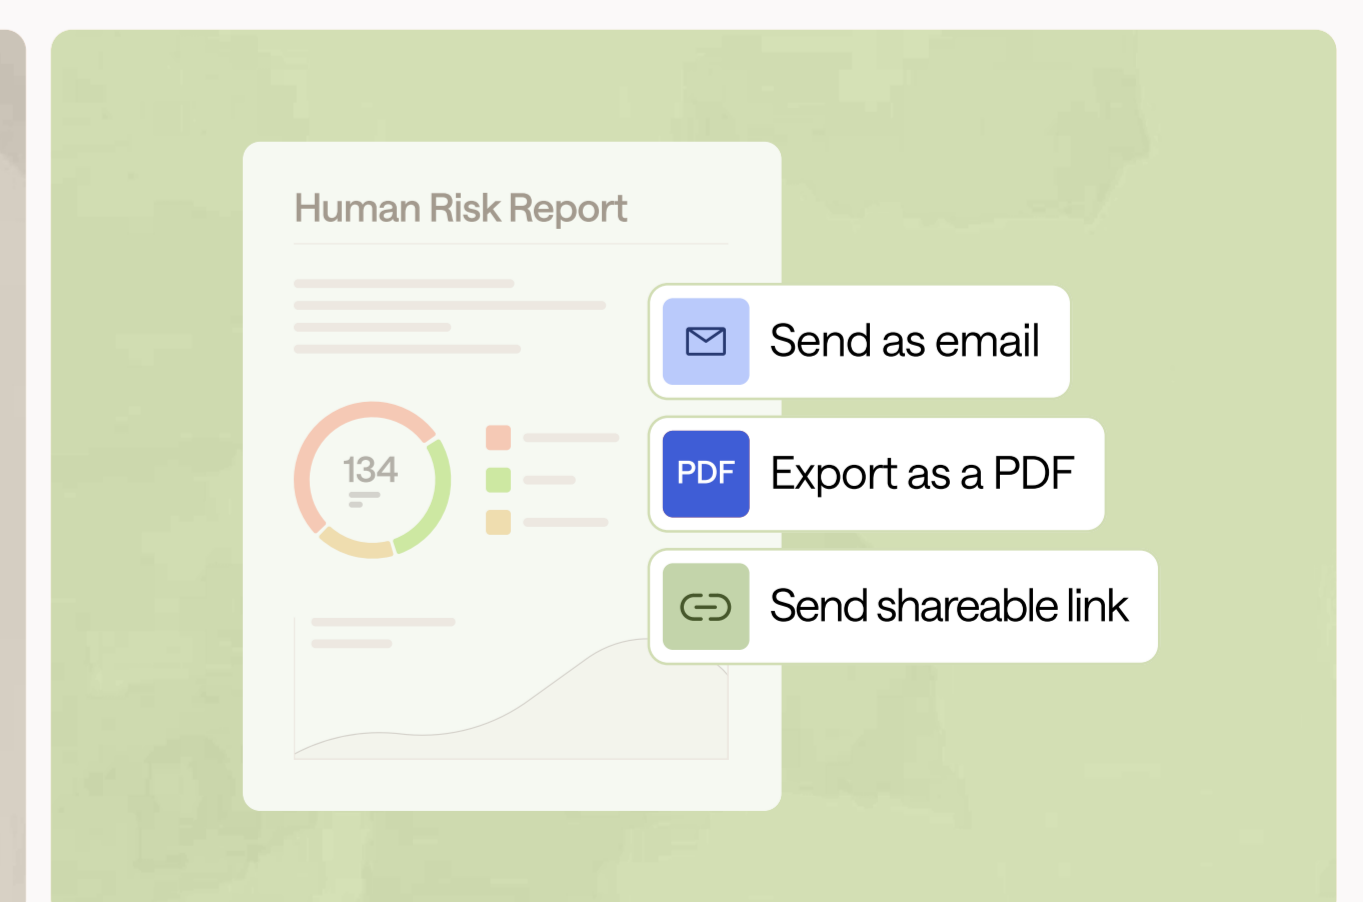

> Guide

Leverage the structured training data to generate personalized security and compliance training

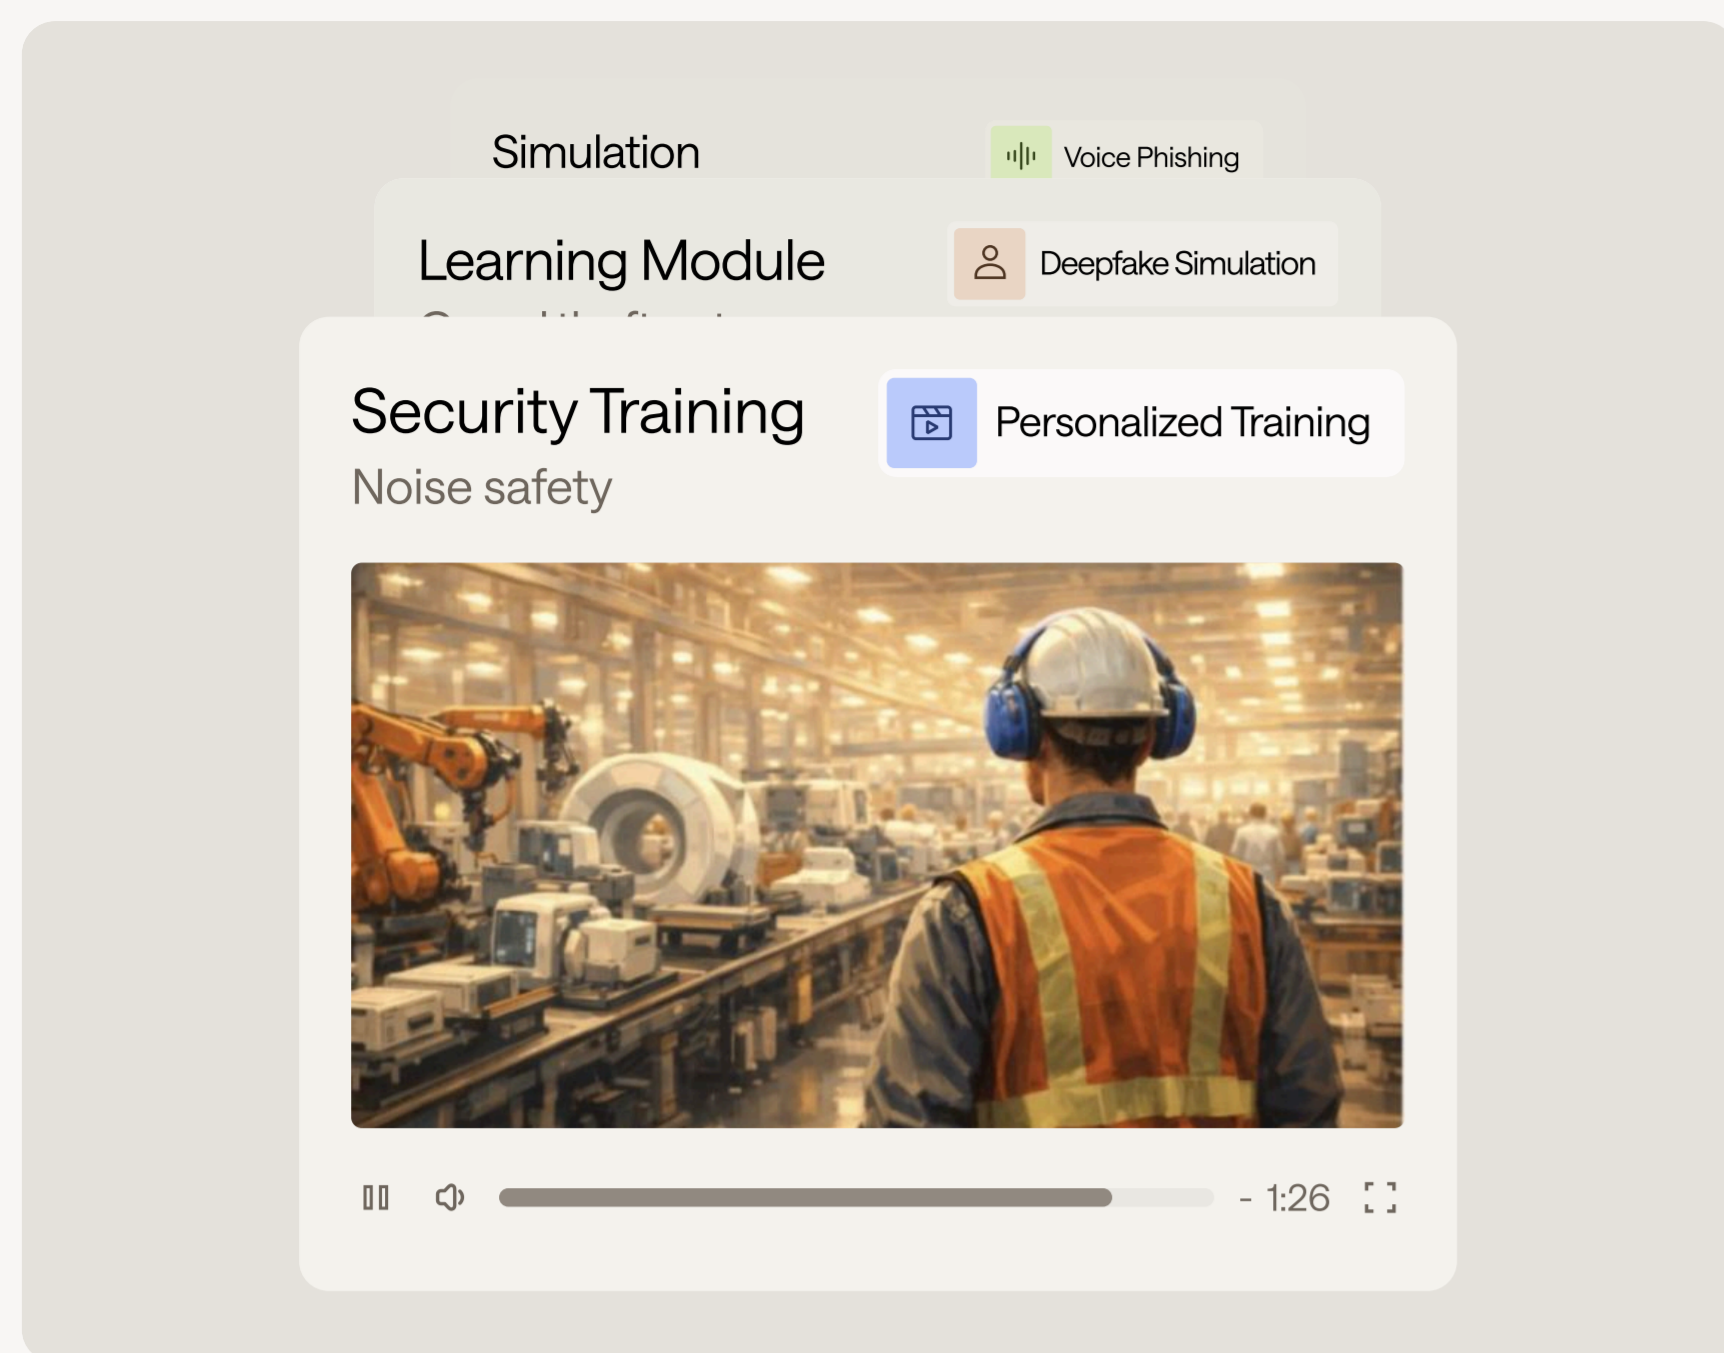

> Report

Communicate outcomes into actionable reports that highlight impact and ROI

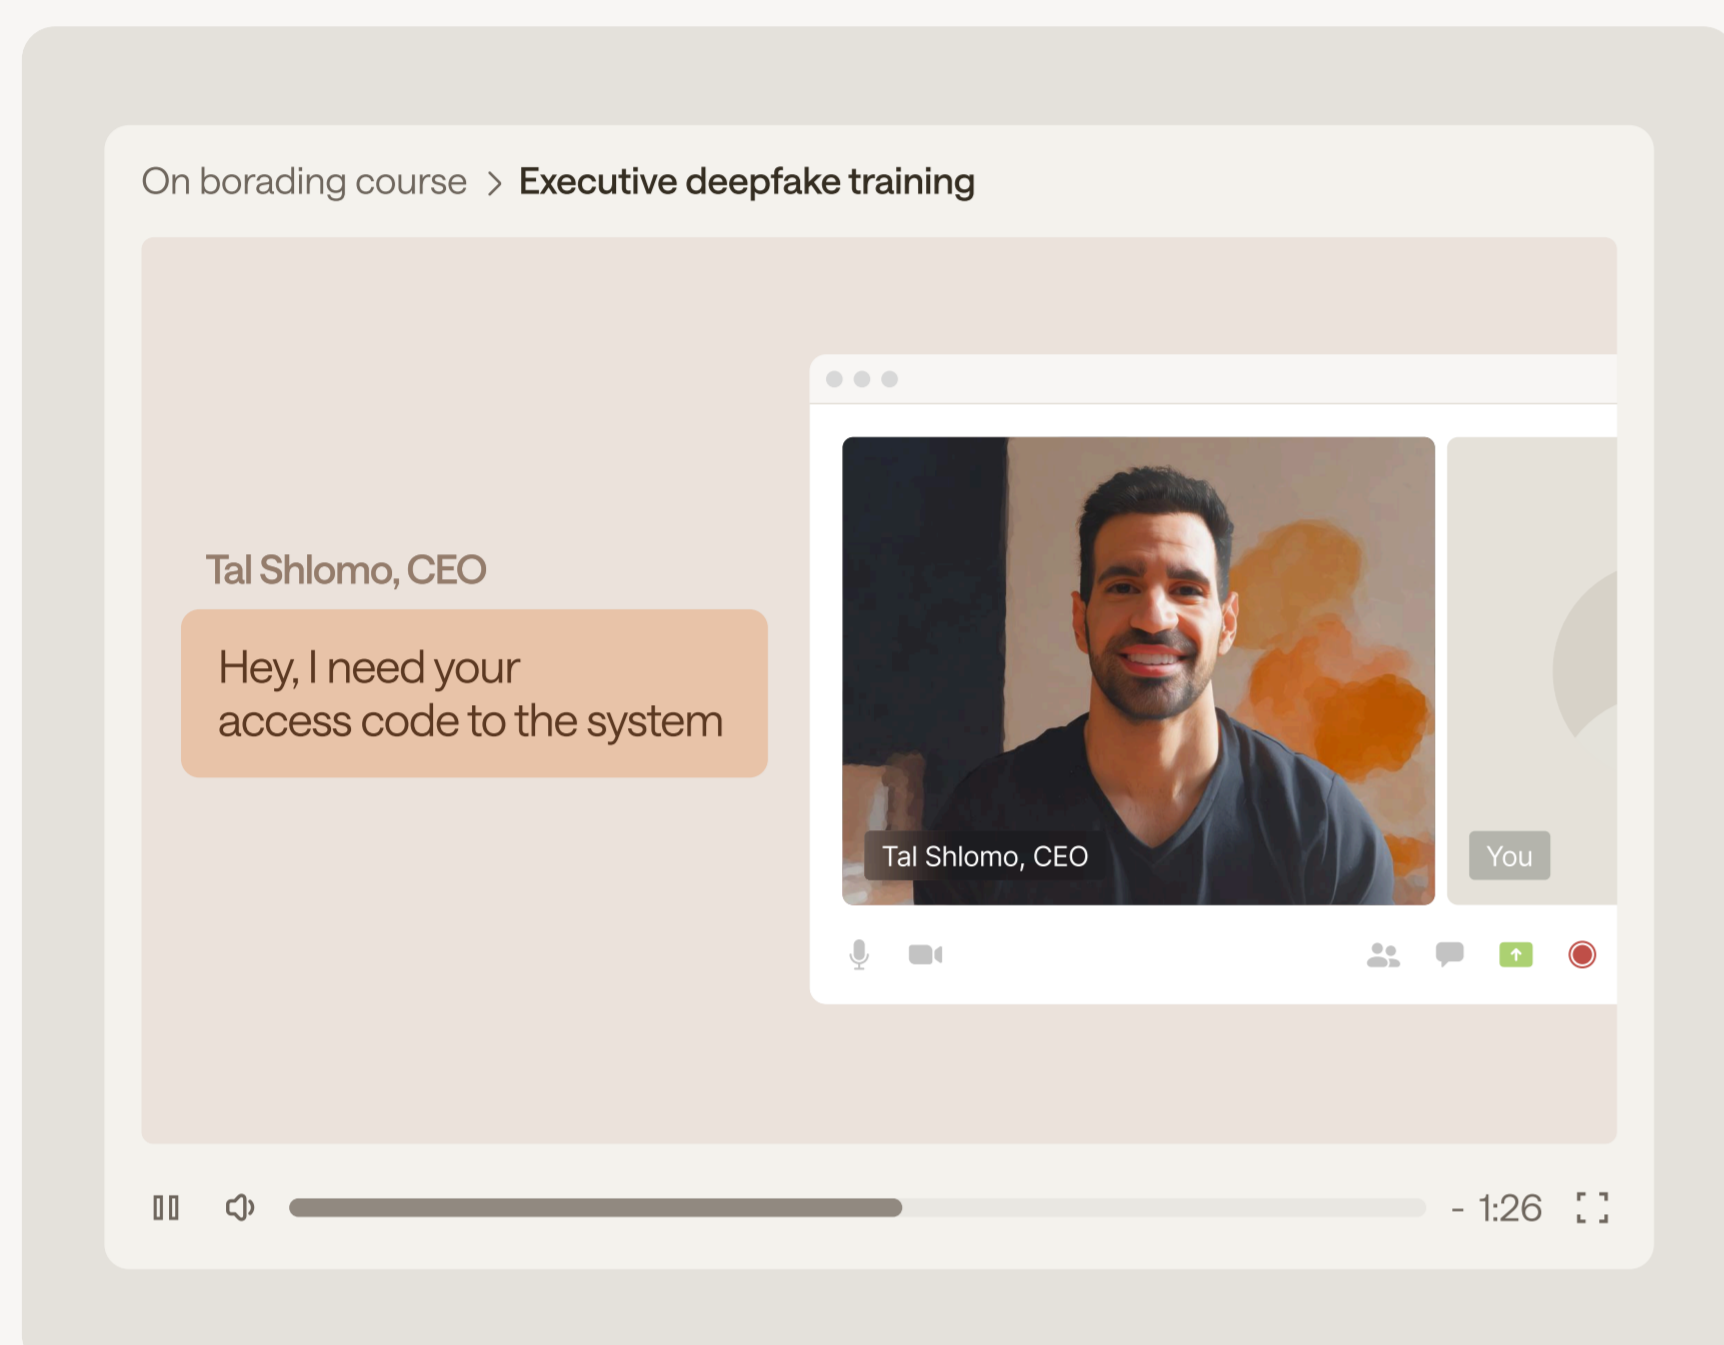

What makes frame security different

Training built around your organization, not a generic library

- > Turn any security topic into personalized, real-world threat simulations and training in minutes.
- > Modules tailored to every department's policies, tools, roles and risk levels - Developers get secure coding, Finance gets BEC awareness, new hires get onboarding built for their role.
- > Bite-sized scenario-based modules employees actually complete - because the content reflects their real work.

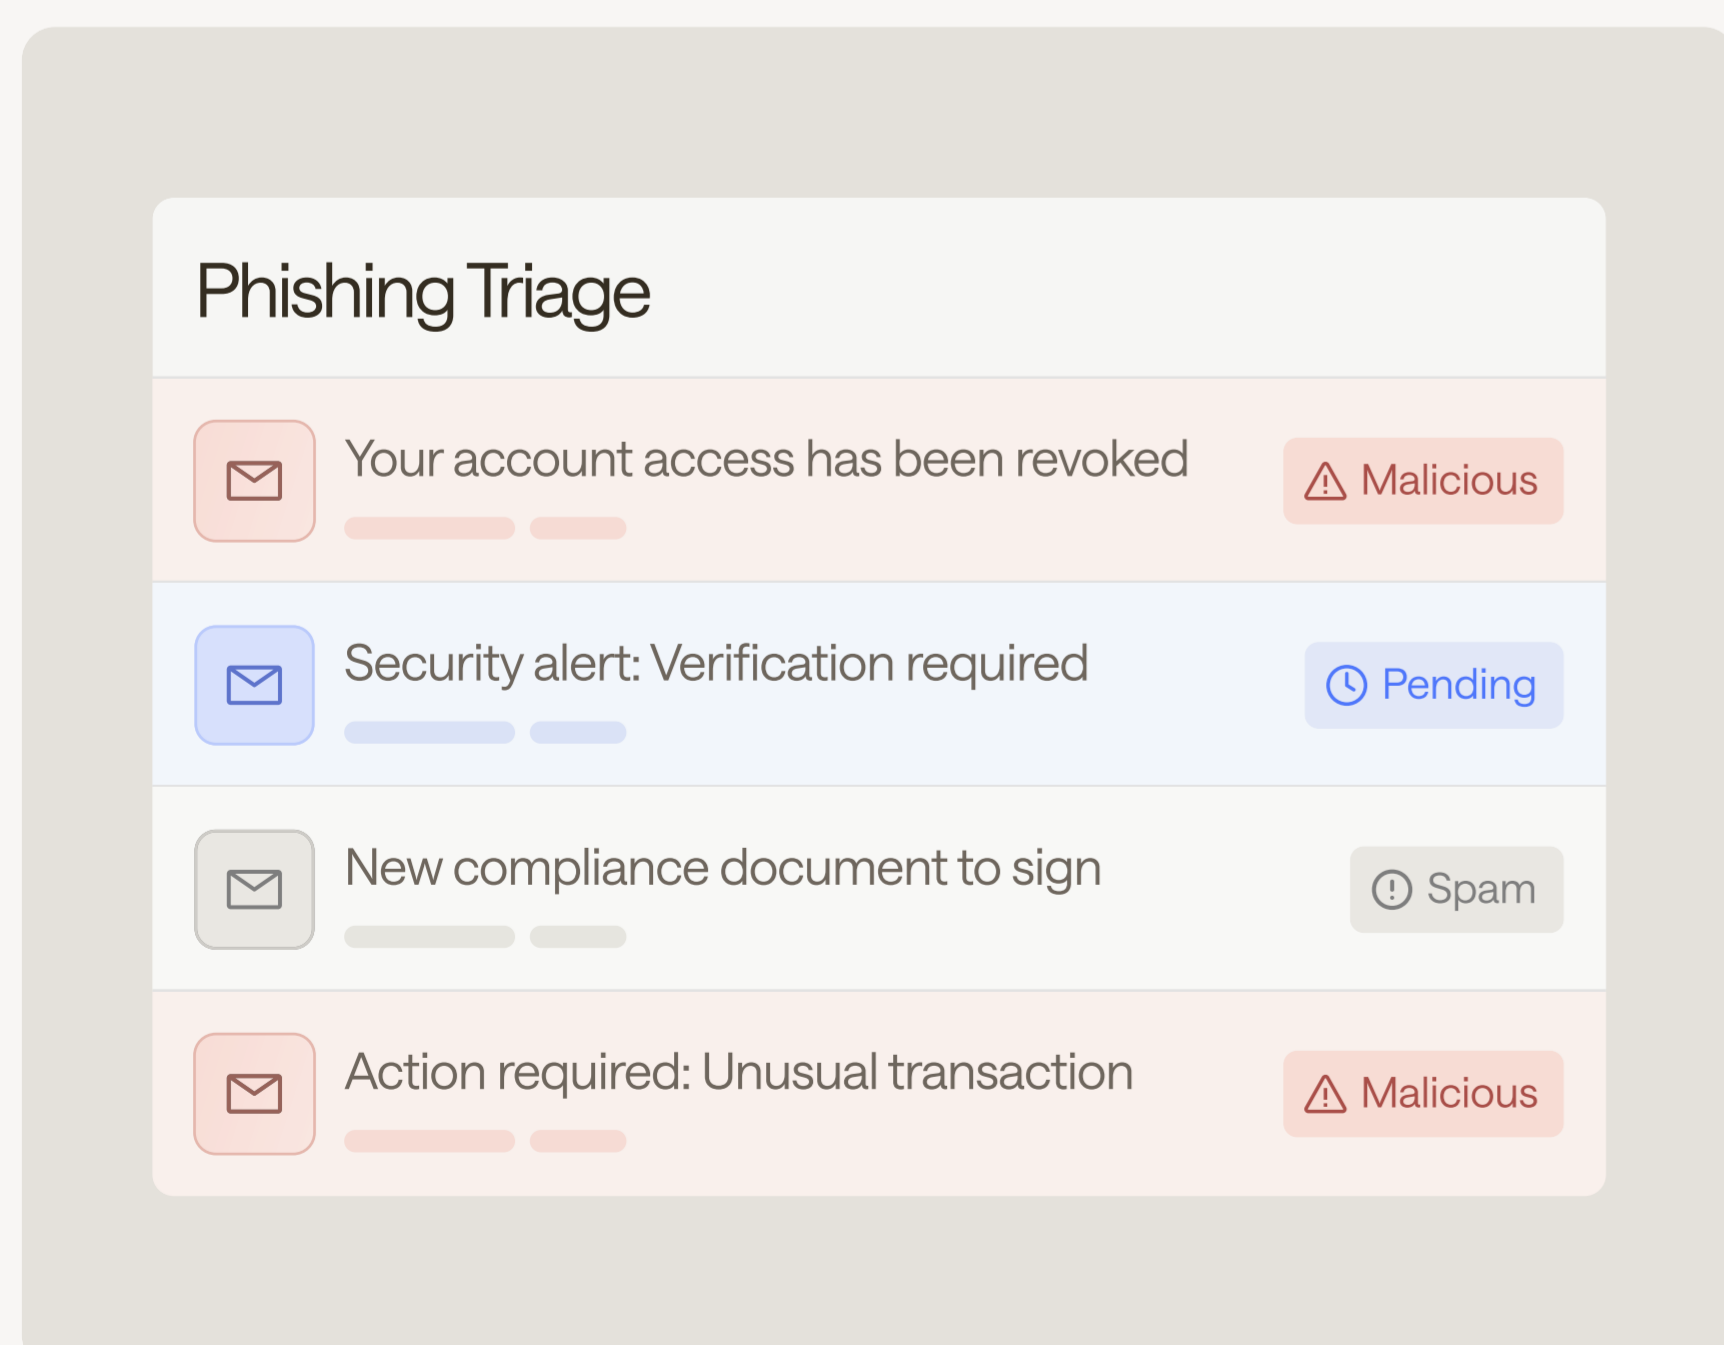

Simulations that mirror real-world attacks

- > Tailored phishing emails built around each employee's role and relationships.
- > Simulated vishing calls that sound like they're coming from inside the company.
- > Convincing deepfakes and video impersonations of executives or known contacts.
- > Real-time coaching of exactly what users missed and why when they fall for a simulation.

Human risk reduction through real measurement

- > Identify your highest-risk employees and monitor how risk evolves over time.
- > Build targeted action plans for specific groups using simulations, training, and tailored interventions.
- > Integrate additional data sources to create a comprehensive view of organizational risk.
- > Deliver executive-level reporting that clearly shows your security posture and trends over time.

Manage every suspicious email across your organization

- > Full visibility into reported emails, across every employee in the organization.
- > Delete suspicious emails for everyone within the organization with a single action.
- > Convert actual phishing attempts into simulations to educate your organization.
